Solutions with Innovative Profile

The Linear System

The MayTec linear guidance system offers the seamless integration of components from all well known bearing manufacturers onto the MayTec profile system.

Along with the integration of these components, MayTec also offers a huge range of accessories to expand and simplify the integration of linear guidance technology with profile technology.

The integration of various linear guidance hardware is also possible due to the modular concept of the system.

Economical and functional solutions can now be realised with a minimum of time and effort.

Performance

Due to the modularity of the MayTec linear system and profiles, you can choose any of the following:

- Delivery of the individual components ex factory
- Delivery of cut and prepared profiles, shafts and components according to parts list for customer's assembly
- Delivery of pre-fitted modular units
- Delivery of complete systems
- Assembly on site

Application

Due to the flexible and modular design, the MayTec profile system is extremely easy to use and fast to assemble. The system is also very easy to modify if necessary and components can be reused at any time.

An expert team is ready to support you with the use of the MayTec profile system and with your specific project requirements. Your chosen configuration depends only on the dimensions, expected forces and the required stability.

Encased Roller Bearings

A tried and tested linear guidance system with a huge variety of application possibilities.

Depending on the required specifications and accuracy, encased roller bearings can be used for low or high load applications.

- Suitable for rough or dirty applications
- High force tolerance with low wear
- High accuracy with low friction
- Long life expectancy

Shaft Guidance

A proven and extremely flexible guidance system due to the compact nature of the construction.

Depending on the application requirements, either sliding or ball bearing guides can be used.

Shaft guide systems are used where high accuracy along with carriage stability is required.

- Compact form
- Low resistance
- High stability
- High accuracy
- Quiet rolling noise level

Linear unit complete with toothed belt drive

Shaft guidance horizontal

A = Return of belt outside

I = Return of belt inside

H1 = height from shaft center to upper edge of profile
 Ix, Iy = moment of inertia

UDR = pinion diameter of turning unit
 UZ = tooth number of pinion (turning unit)
 Wa = axle distance of shaft guidance

LWF-2 complete (Linear shaft guidance, double sided)

Legend

- Descr. = description
- Dim. = dimension
- L1 = orientation of base profile
- L2 = orientation of linear shaft guidance
- Ø = diameter of shaft in mm
- a = axle distance in mm
- I_x, I_y = moment of inertia in cm⁴
- G = weight in kg/m

Orientation

- N = neutral
- H = horizontal
- V = vertical
